ORGANIC APPROVED STANDARDS

1. NPOP Organic Standard
2. ISO 9001 - 2015
3. GMP
4. IFOAM

QUALITY CONTROL

1. Each batch of the parker neem cake is tested in the lab to ensure the quality
2. GMP quality control is adopted.
3. Pre-shipment inspection done before each export shipment

TYPICAL SPECIFICATION

- Nitrogen (N) : 3-5%
- Phosphorous (P2O5) : 0.5-1%
- Potassium (K2O) : 1-2%
- Oil content : 5-6%
- Azadirachtin : > 800 ppm
- Free from Pesticide residue, Minerals, Salmonella, E-Coli and Aflatoxin

Studies have shown that parker neem cake dosed at 250 Kg Per hectare has the same efficiency of the commercial neem cake at a dosage of 1000 Kg per hector

Mode of Action

- Neem Cake helps in improving the plant health in general through increase in the growth and development of plant, results in rich blossoming, strengthening the roots and improving the general appearance of fruits and vegetables
- While applied in conjunction with any Nitrogenous fertilizers, it increases nitrogen fertilizer use efficiency in plants by slowing down the process of conversion of Nitrogenous compounds into Ammonia, Nitrites and Nitrates
- It not only provides nitrogen but also inhibits the nitrification process. When mixed with urea, before applying in the field, can save about 30% of the total chemical nitrogen requirement of crops, which otherwise get lost through natural de-nitrification processes. This ensures sustainable natural agriculture
- It accelerates root development and overall plant growth and protects the plant from soil borne pathogens and pests
- Being totally natural, it is compatible with soil microbes and improves and rhizosphere micro flora and hence ensures fertility of the soil

Storage : Store in dry room temperature

Method of Application

- Neem cake is applied in and around the roots of the plants. It can be applied just like any other organic manures, as per the system adopted at the point of usage of this material. No deviation from the normal procedures adopted nor any special requirements is required. Vegetables, bushes and trees, will have a remarkable result in the improvement of the plant immunity
- Normally the desired quality of neem cake is applied in the soil and worked out in the soil resulting in proper blending of neem cake
- Neem cake can be mixed with the soil nearer the root zone

Crops	Dosage	Frequency Required
Plantation Crops (plantain coconut, areca nut, coffee, tea, mango and all other fruit crops)	2-4 kg / tree	1. Pre monsoon 2. Post monsoon
Annual / seasonal crops (paddy, oil seed, vegetables, oil seeds, sugarcane, watermelon etc.)	150-350 kg / acre	1. During land preparations 2. Before flowering
Spice Crops (Cardamom, turmeric, pepper, vanilla etc.)	500-750 gms / plant	1. Pre monsoon 2. Post monsoon

Packing : 1kg, 20kg, 25Kg, 50Kg and 750 kg Jumbo bag (Flexi bag)

PARKER NEEM TONIC

PARKER NEEM TONIC (Ready to use emulsified neem oil)

Parker neem oil emulsified by natural method.
Ready to use organic pesticide which controls
more than 200 insects/pests

Specification

Azadirachtin : 1500 to 2000ppm
Nimbin : 4000ppm
Salanin : 6000ppm

And also available of

Nimbin, Isonimolicinolide, Mahmoodin,
Azadirachtin, Azadirone, Vepinin Vn, Nimbodin,
Meliantriol, Meldenin

ORGANIC APPROVED STANDARDS

1. NPOP Organic Standard
2. ISO 9001 - 2015
3. GMP
4. IFOAM

Mode of working

- Disrupting or inhibiting the development of eggs, larvae, or pupae
- Blocking the molting of larvae or nymphs
- Disrupting mating and sexual communication
- Repelling larvae and adults
- Deterring females from laying eggs
- Sterilizing adults
- Poisoning larvae and adults
- Deterring feeding
- Blocking the ability to "swallow" (that is, reducing the motility of the gut)
- Sending metamorphosis awry at various stages
- Inhibiting the formation of chitin.

Benefits

- Broad spectrum botanical insecticide, acaroids and fungicide. Primary role of disrupting an insect's metamorphosis.
- Influences the hormonal system, feeding activity, reproduction and flying ability of insects.
- Has no mammalian toxicity, it degrades rapidly in the environment, and has no side effects on non-target species and beneficial insects.
- Can suffocate mites, whiteflies, aphids, cutworms, fungus gnats, shore flies, leaf-miners, thrips and other types of soft bodied insects on contact.
- Effective against rots, mildews, rusts, scab, leaf spot and blights.
- Multiple modes of action make it unlikely that insects and plant pathogens can develop resistance.
- Ideal for Integrated Pest Management (IPM).
- Totally eliminates residue concerns on crops.
- Non toxic to human beings, animals, birds and earth worms.

Note: Shake well every time before open.

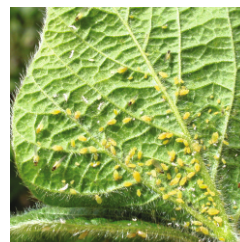

Store in room temperature avoid freezing and don't expose to direct sunlight. Keep the formulation tightly closed after use. Keep Reach out of children / pets.

Rate of application

- 8 - 10 ml per liter at the interval of 7-12 days.
- Can also be mixed with any other organic inputs to enhance its results.
- Spray should be carried out during evening hours i.e. post 4.00 pm
- Spray should cover both upper and lower surface of the leaves to get desired control.
- First application as soon as eggs laying is observed followed by second during egg hatching stage further it has to be continued till nothing prevails

Packaging

250ml, 500ml, 1000ml, 5000 ml
10 Litre, 20 Litre, 25 Litre, 200 Litre

PARKER NEEM TONIC

MODE OF WORKING

1. REPELLENT

The insect from adjacent fields will not migrate nor prepare to lay eggs in Parker neem tonic sprayed plants

2. ANTIFEEDANT

The insects Prepare not to feed the parker neem oil sprayed plants .Even slight nibbling suppresses the digestive system in the insects and insects starve without food
